

How To Not Be Moist

Kevin Martin S1'18

**The Theme for Tonight is
“Moist.”**

What Does “Moist” Mean?

**Maybe We Can Answer This By
Asking...**

What is *not* “Moist?”

Dry

Don't.

Don't. Repeat.

Don't. Repeat. Yourself.

**This is important in code. But it is
also important in other places.**

Such as,

Such as, talking *about* code.

**This is a talk about
technical communication.**

This is not *technically*
a technical talk,

This is *technically*
allowed,

This is *technically*
allowed, and fits the theme.

Why Are Technical Communication Skills Important?

Why Are Technical Communication Skills Important?

Developing effective communication skills is important because being an effective engineer is about more than being effective at writing code.

If you cannot communicate effectively:

Why Are Technical Communication Skills Important?

Developing effective communication skills is important because being an effective engineer is about more than being effective at writing code.

If you cannot communicate effectively:

- People won't understand what you think

Why Are Technical Communication Skills Important?

If you cannot communicate effectively:

- People won't understand what you think
- People won't understand what you do

Why Are Technical Communication Skills Important?

Developing effective communication skills is important because being an effective engineer is about more than being effective at writing code.

If you cannot communicate effectively:

- People won't understand what you think
- People won't understand what you do
- People won't understand what you need

Why Are Technical Communication Skills Important?

This is even more important if you write or build things that are user-facing!

If you cannot communicate effectively:

- People won't understand what you built

Why Are Technical Communication Skills Important?

This is even more important if you write or build things that are user-facing!

If you cannot communicate effectively:

- People won't understand what you built
- People won't understand how to use it

Why Are Technical Communication Skills Important?

This is even more important if you write or build things that are user-facing!

If you cannot communicate effectively:

- People won't understand what you built
- People won't understand how to use it
- People won't understand why they need it

tldr;

**If you can't communicate
effectively...**

**You might as well not have built
anything!**

**Welcome to School for Engineers
Who Can't Write Good and Want to
Learn to Make Docs Good Too**

Effective Technical Communication in 1 minute

Know your audience! Technical communication is directed towards people who are *already* under significant cognitive load. The most important takeaway here is remaining aware of this when you are writing.

Effective Technical Communication in 1 minute

Know your audience! Technical communication is directed towards people who are *already* under significant cognitive load. The most important takeaway here is remaining aware of this when you are writing.

Otherwise, your docs make people feel like this:

Know your audience! Technical communication is directed towards people who are *already* under significant cognitive load. The most important takeaway here is remaining aware of this when you are writing.

Otherwise, your docs make people feel like this:

Effective Technical Communication in 1 minute

- Use simple “subject-verb-noun” sentences. (This is the hardest part!)

Effective Technical Communication in 1 minute

- Use simple “subject-verb-noun” sentences. (This is the hardest part!)
- Remain in the present tense. (This keeps it engaging!)

Effective Technical Communication in 1 minute

- Use simple “subject-verb-noun” sentences. (This is the hardest part!)
- Remain in the present tense. (This keeps it engaging!)
- Speak directly to the reader, not to “the user.” (This *also* keeps it engaging!)

Effective Technical Communication in 1 minute

- Use simple “subject-verb-noun” sentences. (This is the hardest part!)
- Remain in the present tense. (This keeps it engaging!)
- Speak directly to the reader, not to “the user.” (This *also* keeps it engaging!)
- Keep paragraphs 3-5 sentences, with headings every 3-5 paragraphs. (This makes it navigable!)
